FOUR NEW BOOKS FROM SME

Mine Hydrology

by R. E. Williams, G. V. Winter,
G. L. Bloomsburg, D. R. Ralston
(1986, 169 pages)

Presents an analysis of the state of the art methodologies and technologies available for predicting mine water inflow and its impact on the hydrology of the vicinity of the mine. Data collection techniques, equipment, and mathematical model simulation of mine water inflow are discussed and applied to two existing mines

Rock Mechanics: Key to Energy Production

H. L. Hartman, editor
(1986, 976 pages)

Proceedings of the 27th US Symposium on Rock Mechanics, held at University, AL, celebrates the 30th anniversary of the founding of the symposia. The theme—*Rock Mechanics: Key to Energy Production*—seemed particularly appropriate because of the symposium's location, deep in energy country.

Mining Engineering Analysis

by Christopher J. Bise
(1986, 153 pages)

An attempt is made to fill the gap between theory and application in mining engineering. The book is based on *SME Mining Engineering Handbook* and the *Coal Mining Technology—Theory and Practice*. Each chapter deals with the theory and then presents problems of applications and the solutions to them.
